AI PRODUCT MANAGER — I SHIP WITH AGENTS, IN PUBLIC

Twenty years of enterprise product leadership in regulated domains. March of 2026 - I went from zero hands-on coding or AI experience to designing, building, and operating a live multi-agent system — and published the whole journey, including the failures. The site is the resume. This page is the index.

PROOF, CLICKABLE

Claudemonzter — a multi-agent AI lab, built and run solo — jeremymontz.github.io/Meta1 *Mar 2026 → live now*

- 8 role-scoped agents, 3 project domains, 1 human in the graph — live status dashboard fed by agent self-reporting; every agent's session state is public.
- Evaluation & guardrails: proof-of-load verification passphrases, verify-quote-or-abort source checking, flag-don't-fabricate discipline — a 1,145-page automated pipeline ran with 0 failed pages and 328 honestly-flagged hedges.
- Persona engineering: a 9-dial calibration matrix in a spreadsheet tunes the behavior of every agent — behavior-as-configuration, cascaded by a skill at session start.
- Production patterns: 25+ authored agent skills, MCP integrations (GitHub, Sheets, Gmail), scheduled autonomous daily publishing, GitHub Issues-driven roadmap.
- The write-ups: essay series on multi-agent orchestration, adversarial validation, coordination tax, and closed-loop coaching — the PM thinking, shown.

Product Owner, agentic data discovery over enterprise geospatial data — T-Mobile (current, contract) *Jan 2024 – Present*

Delivered, with a 7-person team, our application's first agentic feature: a three-skill agent (intent clarification, data discovery, scope-refusal fallback) searching 132 views / 2,720 data layers for ~300 active users — 27 authored stories, 6-person team, ~10–12 weeks. Also: a Copilot evaluation that ended in a documented kill, a four-platform AI practice (Copilot, ChatGPT, Claude, Rovo), and a pilot for an AI-assisted Product Owner.

THE TWENTY YEARS UNDERNEATH

- Senior Product Owner, Nuix — first unified 6-product portfolio roadmap; FedRAMP High readiness across 8 teams.
- Product Manager, Ion Channel — DevOps security SaaS for the intelligence community; AWS Marketplace launch.
- Product Manager, kCura/Relativity — launched forensic collection product; 8/10 beta-to-paid conversion.
- Senior PM, Epiq · PM, xIoT · product/SE/training leadership at Exterro, Stratify, Discover-e — eDiscovery SME since 2005; managed technology-assisted review (human-in-the-loop ML) before the industry called it AI.

CREDENTIALS

- CSPO · BA with Honors, University of Oregon · US Marine Corps — Signals Intelligence (TS/SCI)
