SENIOR PRODUCT PROFESSIONAL

Accomplished product leader with experience in overseeing and managing the complete software development lifecycle. Background in user experience and product design, strategic planning and roadmaps, product operations, portfolio management, data ETL, API development and enterprise integrations. Adept at leading cross-functional teams to ensure product releases align to engineering quality standards, business strategy and customer requirements. Specializing in bespoke reports and dashboards that leverage diverse data sets to extract insights, inform strategies, measure outcomes, and align product operations to customer value. Core competencies include:

- **Products:** SaaS and on-premises | enterprise solutions | B2B & B2C
- **Markets:** legal software | e-discovery | GRC | computer forensics | cybersecurity
- **Technologies:** Monolithic and microservice architectures | API-driven | AWS (S3 and EC2) | ETL | SQL Server | MongoDB | JavaScript (Angular and React) | Windows and Linux
- **Processes:** Waterfall | 'Wagile' | Agile Scrum | Kanban. Mix of periodic release planning and CI/CD cadences.
- **Office tools:** MS Office (expert) and Google Suite | SharePoint | Confluence | SQL Studio
- **eDiscovery tools:** Nuix Discover & Workstation | Relativity | Exterro | Stratify | Concordance
- **Task tracking:** GitHub | JIRA | VersionOne | Team Foundation Server | Clubhouse
- **Support:** Service Now | Zendesk | Zoho
- **UI/UX design:** Axure | In Vision | Figma
- **Product roadmaps:** Jira Align | Aha!

PROFESSIONAL EXPERIENCE

T-Mobile

January 2024 – Present

Data Analytics Product Owner and Team Coach

Product Owner and Agile coach for teams of data scientists, business intelligence engineers, and application developers to build geospatial reporting solutions for T-Mobile's Broadband Internet line of business.

- Managed a suite of internal-facing tools dependent on enterprise data and mature APIs and integrating them with new advanced APIs and emerging business data streams coming from new partners and acquisitions.
- Visualized and streamlines a torrent of work-streams competing for limited resources to facilitate planning, prioritization, dependence management, and trade-off conversations.
- Developed a visual roadmap in Aha by exporting and augmenting Jira data with SWAGs and progress reports.
- Scoped project plans, features, and user stories for sprint and PI planning. Created dashboards to monitor progress and identify trends in need of coaching and improvement.
- Facilitated cross-team forums for process definition, triage, project requirements gathering, and postmortems.

Nuix Ltd

June 2021 – July 2023

Senior Product Owner

Led at multiple levels, including within an engineering team focused on the security of incoming data, a large, cross-functional team devoted to the success of a single product, and at the program / portfolio level, bringing acquired products and previously siloed teams together to build the B2B company's first unified product roadmap; managed Product operations and tasks to present combined solution strategies at quarterly business reviews.

- Led weekly cross-functional product team meeting to triage support, site reliability, and security issues (SaaS and On-Prem); routed among eight development teams working on the Discover product for resolution.
- Implemented the company's first unified product portfolio roadmap of six products; administered the roadmap in Aha and integrated it with Jira. Transitioned strategy from 'Products' to 'Solutions' in round two.
- Achieved FedRAMP High readiness security level; monitored output from code scanners (White Source, SonarQube, Netsparker) and 3rd-party penetration tests; built Jira dashboards to track resolution per compliance schedules.
- Formalized issue triage process to objectively score and prioritize issues across teams; documented how this was done for other products' teams to adopt.

- Mentored the program transformation manager and other product managers on how to use Aha to align strategies, build roadmaps, and standardize processes and reports.
- Measured performance of eight teams; calculated team averages for maintenance efforts, and feature capacity, and used past velocities to make accurate estimates and future predictions; told the story of how this changed over time.
- Invented a report template that merged data from DEV and Support tools to reconcile statuses and clean up existing backlogs; established a cadence to communicate updates in the absence of an automated solution.

xIoT LLC

February 2020 – January 2021

Product Manager

Converted visionary's notes into interactive product roadmap in Aha! with epics, requirements and, ultimately, budget estimates and schedules for a small B2C start-up LLC attached to a Services company. Managed cost and tactical execution by third-party development agency in Clubhouse using Kanban and Agile.

- Built a dynamic executive reporting dashboard, combining data from multiple sources for bespoke reports.
- Standardized support and development processes through discussion, documentation, and visualizations.
- Expanded and completed knowledge base and training articles on unique ETL solution.

Ion Channel

July 2017 – July 2019

Product Manager

Soft-launched new commercial B2C SaaS offering for DevOps security, designed for the US intelligence agencies' high-security requirements, made available on AWS Marketplace and intended for Gov Cloud.

- Developed an extensible product roadmap with filtering capabilities to provide various strategic vantage points for internal and external use. Invented a way to 'see' and measure technical debt and integrate it with the roadmap.
- Implemented process for requirements workflow, using integrated tools for each stage of ideation through strategic planning in Aha, and tactical execution in Jira, providing custom status reports.
- Performed competitive analysis and clarified vague customer and business cases into actionable user stories.
- Groomed the backlog ruthlessly to enhance team focus; employed a funnel approach to capture all ideas and potential product strategies, but with "just in time" task definition to minimize premature analysis and wasted effort.
- Led planning sessions, UI design sessions, QA strategy sessions, documentation reviews, daily stand-ups, and iteration reviews for the Agile / Kanban team.
- Wrote customer-facing documentation and diagrammed technical microservices and endpoints using Zoho apps.
- Conceived a roll-out plan for a new user interface that facilitated incremental delivery while still providing a consistent look and feel throughout the transition/upgrade.
- Planned product launch event to coincide with OSCON 2018; found appropriate venue and arranged for drinks and catering; ran event and performed product demos; stayed under budget.
- Managed resource needs; identified when new hires were needed based on project scope and customer requirements; coordinated with recruiters; scheduled tech screens, interviews, and code pairing exercises.
- Grounded start-up team's collaborative decision-making process.

Epic Systems Inc

May 2016 – February 2017

Senior Product Manager

Developed a product portfolio roadmap and UI designs for two new internal applications within a large B2B services company, while maintaining backlogs for three additional applications, with plans to integrate with the platform.

- Collaborated with a diverse group of stakeholders to understand their pain points and gather requirements, then later validated the deliverables; communicated updates.
- Coordinated requirements defining sessions with product owners, architects, BAs, and UX/UI designers for the creation of prototypes, user stories, and other deliverables.
- Supported PMO office with the roll-out to global corporate offices for user acceptance testing; triaged issues with Support and negotiated prioritization among six scrum teams; tracked enhancement requests.
- Diagrammed complex data flows across a variety of applications' input sources, with disparate back-ends and

outputs, to illustrate our work for business leaders.

JEREMY MONTZ | PAGE THREE

kCura Corp (Relativity)

March 2013 – June 2015

Product Manager

Managed two B2B products and led two Agile Scrum development teams while directly managing two Business Analysts. Mentored other Product Managers and Sales on corporate use-cases. Integrated an acquired product with platform APIs.

- Approved other teams' deliverables, including Performance, UX, Training, Documentation, Sales, and Marketing.
- Launched a new forensic collection product to the market; formulated product strategy and pricing strategy, and drove exposure by aiding in Sales enablement programs.
- Implemented a pilot 'beta' program, provided training and support while capturing feedback and enhancement requests; converted 8/10 early adopters into license holders.
- Oversaw the complete SDLC, including two major releases, several minor releases, and monthly service patches.
- Built product roadmaps in Aha and task items in Team Foundation Server (TFS); prioritized product backlog with equal mixture of early adopter feedback and long-term strategic goals.
- Negotiated with Development to ensure reliable product planning and predictable releases while maintaining quality standards; validated features were made to specification before release.
- Presented product at all levels of the company, including executive product summits, companywide sprint demos, pre-release demos and deep dives for Sales and CS.
- Represented company at industry conferences, user conferences, EDRM.net working groups, and other events.

Exterro Inc

July 2008 – January 2013

Product Manager (role)

Held multiple titles, including Client Success Project Manager, Product Specialist, Sales Engineer, and Training and Development Manager. Resident product and market expert who led the design of new B2B solutions.

- Invented new product functionality based on customer interaction, competitive analysis, and subject matter expertise. Core product was a configurable workflow engine enhanced by enterprise integrations into corporate HR systems and the use and development of APIs for various eDiscovery application.
- Evaluated software and internal procedures and wrote recommendations supporting a transition from Waterfall to Agile development and implementing new processes using VersionOne.
- Approved final written specifications and prototypes for hand-off to Engineering.
- Verified newly delivered functionality to ensure requirements were met; tracked issues and defects through multiple release cycles.
- Coordinated testing by internal business users as well as external user Beta programs.
- Formulated FFBs (features, functions and benefits) to assist in the creation of product marketing collateral.
- Supported the sales cycle, assisting with the initial RFI/RFP, product demonstrations, POC training, and strategy.
- Created an internal learning center, with workflow diagrams and product videos.
- Reported directly to the Executive Team as a trusted advocate for product and customers.
